

**HIM & AVG: 1+1>2**

**INDAVER**

Indaver Deutschland GmbH

**HIM** **AVG**

## 2 x 40 Years of Hazardous Waste Disposal Experience

Two powerful new partners joined the INDAVER Group in 2008: the disposal and remediation specialist HIM with its head office in the Rhine-Main region, and the Hamburg disposal company AVG. Both companies have been among the most renowned providers in the German waste management industry for nearly 40 years.

Together with INDAVER Germany and the two logistics companies GAREG and Panse Wetzlar, HIM and AVG are a major force in the German disposal market representing performance, flexibility, proximity to the customer and high-quality disposal solutions on a grand scale - nationally and, as a member of the INDAVER Group, also internationally.

With our extensive range of services and our integrated approach (total waste management), the INDAVER Group has established itself as a specialist for sustainable waste management in Europe. Customers for which we conceive and implement high-quality, sustainable and cost-effective solutions include industrial and commercial enterprises as well as retailers and municipalities.

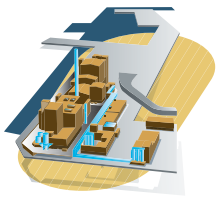

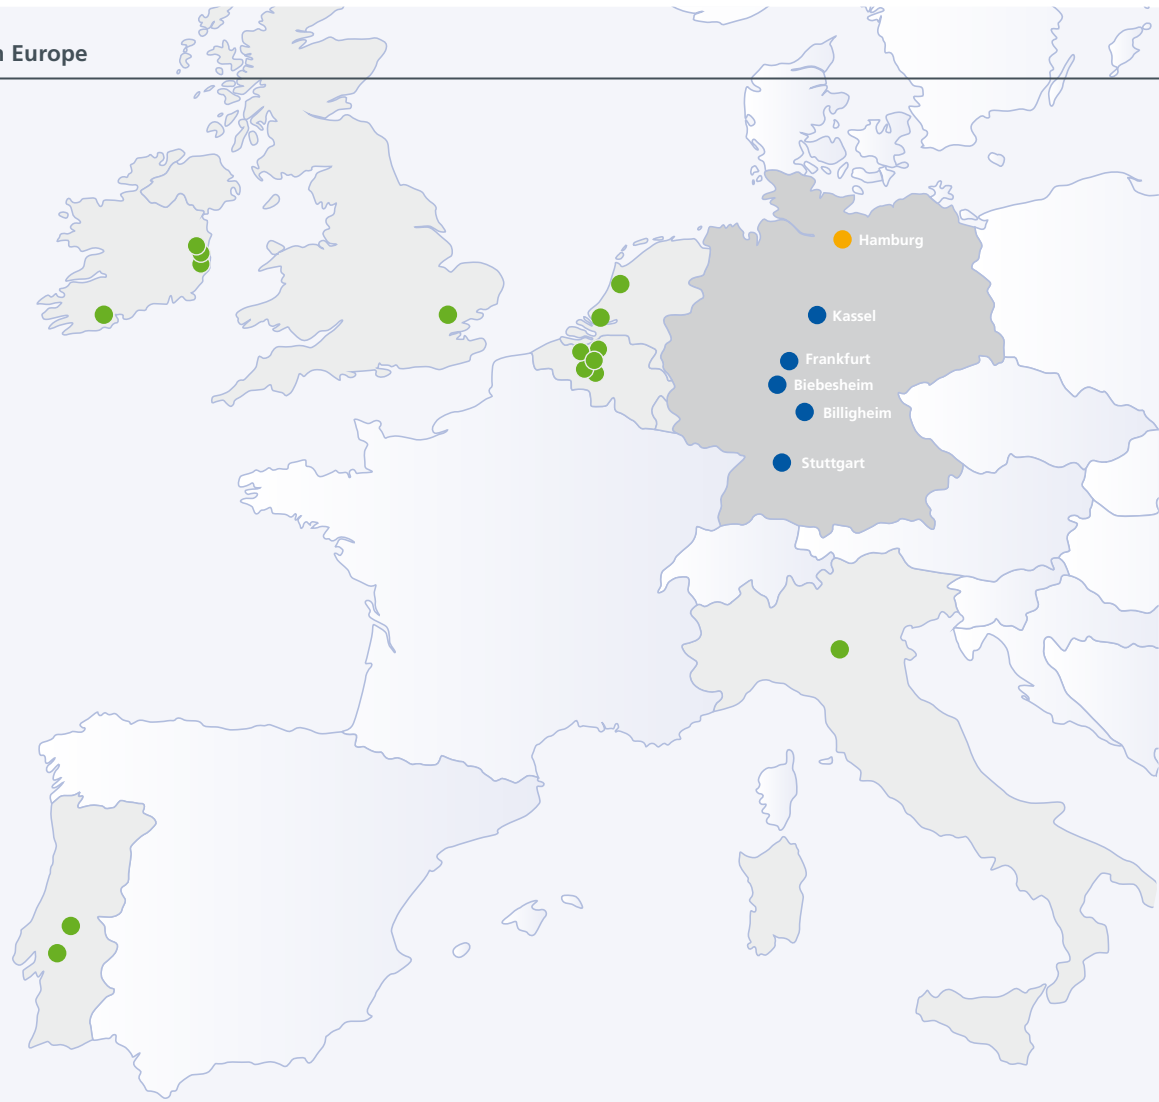

## INDAVER: Close to You

Our extensive network of specialised treatment plants means we have excellent connections to many locations in Germany and the adjacent countries.

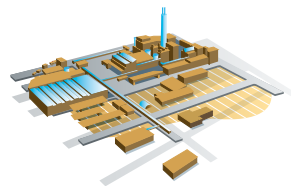

With a logistics system that incorporates our own as well as select external resources, we ensure that your waste is transported away quickly and securely in special vehicles and suitable containers for proper disposal. Keeping transportation routes as short as possible while also ensuring that hazardous waste is securely transported to the special treatment facilities operated for the purpose are two aspects of the transport management services we provide.

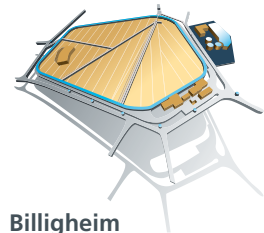

■ Our locations in Europe

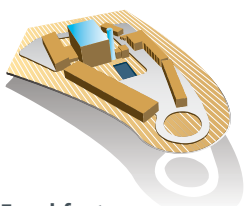

**Hamburg**  
Hazardous waste incineration plant, chemical-physical treatment plant, separation plant for oil/water mixtures

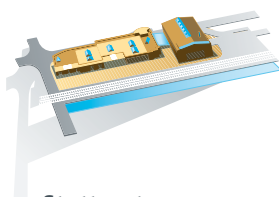

**Biebesheim**  
Hazardous waste incineration plant, emulsion separation plant, integrated pre-treatment plant, transfer station

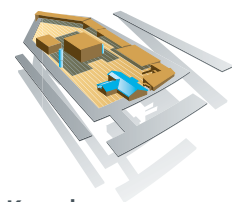

**Billigheim**  
Hazardous waste landfill, transfer station

**Frankfurt**  
Chemical-physical treatment plant, transfer station

**Stuttgart**  
Chemical-physical treatment plant, transfer station

**Kassel**  
Chemical-physical treatment plant, transfer station

# From a Precise Approach to an Overall Solution

Waste disposal is a matter of trust. Whether you have an acute disposal problem, require the remediation of contaminated sites under challenging conditions or desire a comprehensive concept for your waste management needs (total waste management) – we develop the right solution for you.

- **Disposal in our own facilities**

(Hazardous waste incineration; chemical-physical treatment; emulsion separation; hazardous waste landfill; etc.)

- **Disposal in audited special facilities**

(underground waste disposal, underground backfilling)

- **Pre-treatment in our own integrated pre-treatment plant with shredder in Biebesheim**

- **Pre-treatment in audited special facilities**

- **Transportation** (own and external logistics)

- **Container rentals**

- **Staffing / on-site service**

- **Web reporting**

- **Total waste management**

(Consulting, analysis, planning, handling, logistics, reporting, training)

- **Remediation of contaminated sites**

All services related to the remediation of contaminated sites, including landfill and facility remediation under challenging conditions

## We are the Hazardous Waste Disposal Specialists

As a member of the INDAVER Group in Germany we – HIM and AVG – are able to offer you even more highly customised solutions to your disposal problems. Being part of this group strengthens our international and national performance for you. Comprehensive consulting is just as much part of the services we offer as environmental awareness, smooth handling and solutions to your disposal problems that cover all aspects you require (such as logistics). As our customer, you benefit from the fact that we have experienced disposal specialists working as customer consultants at the Biebesheim, Hamburg and Stuttgart sites who are familiar with all our facilities and services in the north and south. We are working for you.

### ■ HIM

As a modern waste management service provider, HIM has been developing secure and economical disposal concepts for its customers since 1972. At five sites in Germany, we operate specialised facilities for the pre-treatment, transfer, disposal and chemical treatment as well as incineration of hazardous substances.

### ■ AVG

AVG has held a permanent position in the waste disposal industry of northern Germany since 1971. A plant for the high-temperature incineration of waste forms the core of its efficient disposal centre. The facilities of AVG include a chemical-physical treatment plant, a separation plant for oil/water mixtures and an interim storage facility.

## Our benefits for you:

- Know-how and technology of a leading hazardous waste specialist
- Decades of experience in the operation of our own treatment plants
- Specialist for hazardous waste with top employees, top technology and excellent references
- The efficiency and performance of an international group
